Continuation of Disposition of Claims: Claims pending in the application are 13-15,25,26,28,29,32,59,69,72-74,83,85,93,96-103,116-118,212,220,221,226 and 227.

Application/Control Number: 09/890,172

Art Unit: 3738

The indicated allowability of claims 13-15, 26, 28, 29, 97, 212, and 227 is withdrawn in view of the reference(s) to Hofmeister. Rejections based on the newly cited reference(s) follow.

Claim Objections

Claims 25, 26, 28, 29, 32, 69, 72-74, and 96-97 are objected to because of the following informalities:

With regard to claims 25, 26, 28, 29, 69, and 72-74, line 14 of each claim, the language "comprising an inner bolt" is confusing since it appears that the extension has this feature. The Examiner suggests inserting "said spacer further" in order to overcome this objection.

With regard to claim 25, line 16, the "protrusions" should be singular "protrusion" in order to be grammatically correct.

With regard to claim 32, line 18, "comprises" should be changed to "comprise" to be less grammatically awkward.

With regard to claims 96 and 97, the language "spacer comprises" is confusing since the preamble ended on line 1 of the claim with the same language. The Examiner suggests replacing this language with "spacer is formed of" in order to overcome this objection.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 09/890,172

Art Unit: 3738

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-15, 26, 28, 29, 97, 212, and 227 are rejected under 35 U.S.C. 102(b) as being anticipated by Hofmeister (US 5,725,341). Hofmeister anticipates the claim language where the end-cap as claimed is the flange (2) of Hofmeister (see column 4, lines 24-62 and Figure 1), the tube as claimed is tube (1), the slits as claimed are between folding element (6) and flaring element (7), the compressed state as claimed is best seen in Figures 3 and 4. The fastener is inherently adapted to support vertebral plates at least in a cadaver, small mammal, or an individual lying down. The greater stress capacity as claimed is inherent to the elements (6) of Hofmeister as compared to elements (7).

With regard to claim 15, when the cap includes the tube section proximal to the folding element (6), then the claim language is fully met.

With regard to claim 26, the head includes screw head (8) with flange (2).

With regard to claim 28, when the "inner thread" is understood to be the thread inside the tube (1), the claim language is met. The pole element as claimed is the plug (4) of Hofmeister.

With regard to claims 97 and 227, the adhesive (5) ensures that the fastener maintains or remembers the deformation given it during compression and thus, the adhesive is the shape memory material as claimed.

With regard to claim 212, Applicant is directed to Figure 4.

Art Unit: 3738

Allowable Subject Matter

Claims 25, 32, 69, 72-74, and 96 are objected to but would be allowable if rewritten to eliminate the objectionable language.

Claims 59, 83, 85, 93, 98-103, 116-118, 220, 221, and 226 are allowed over the prior art of record.

Conclusion

Applicant should specifically point out the support for any amendments made to the disclosure, including the claims (MPEP 714.02 and 2163.06). Due to the procedure outlined in MPEP 2163.06 for interpreting claims, it is noted that other art may be applicable under 35 USC 102 of 35 USC 103(a) once the aforementioned issue(s) is/are addressed.

Applicant is respectfully requested to provide a list of all copending applications that set forth similar subject matter to the present claims. A copy of such copending claims is respectfully requested in response to this Office action if the application is not stored in image format (i.e. the IFW system) or published.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Paul B. Prebilic whose telephone number is (571) 272-4758. He can normally be reached on 6:30-5:00 M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on 571-272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
